(Received 28 January 2017; Revised 19 February 2017; Accepted 3 March 2017; Available online 15 March 2017)

Abstract - This paper presents a bibliometric analysis of the Growth rate and core journals in the field of Lung Cancer covered in MEDLINE data which are covered in the Pubmed during the study period i.e. 2010 to 2015. It was found that 42.93% records were Journal Article. It is noticed that 64180 of the records on 'Lung Cancer' are covered in the MEDLINE database for a period of six years. It is found that the maximum number of records (14692) was published during the year 2015, followed by 14626 in 2014 and 13167 in 2013. RGR has been decreasing from 2011 (2.73) to 2015 (0.26). On the other hand, the Doubling Time (Dt) has shown an increasing trend. It is also found that 53 core journals grouped in zone 1 published 9211 articles accounting for one third of the total output. Similarly the second zone comprises of 291 journals and 2759 journals grouped in third zone. The research productivity of Lung Cancer confirms the implication of Bradford's Law of Scattering.

Keywords: Bibliometrics, Lung Cancer, Growth Rate and Core Journals.

I. INTRODUCTION

Bibliometrics is a branch in Library Science and a number of studies are being carried out for a quantitative study of the various aspects of literature of a given subject. Research in bibliometrics includes studies pertaining to scattering of articles over journals, growth of literature, obsolescence of documents, productivity and impact of research, distribution of scientific publications by country, by language, citation studies, and so on. In addition, many bibliometric studies of important fields have appeared during the last three decades. The aim of in this study is to identify the Growth rate and core journals in the field of Lung Cancer (2010-2015) in MEDLINE data which are covered in the Pubmed.

II. REVIEW OF LITERATURE

Scientific growth has involved not only increase in manpower but also finance¹. Wooster² has estimated the number of journals that existed in the world at any one time, whereas some estimate of the number of papers published annually at various time was done by Vickery³ and Martyn⁴. Gottschalk and Desmond⁵ have estimated the number of scientific and technical journals that existed in the world. Growth studies in scientific areas studied by Baker⁶ in chemistry, Conard⁷ in biology, May⁸ and Lamb⁹ in mathematics, Sengupta in microbiology¹⁰, physiology¹¹,

biochemistry¹², Ramesh Babu and Ramakrishnan in Hepatitis¹³, Krishnamoorthy, Ramakrishnan and Devi¹⁴ in Diabetes and Ramakrishnan and Thavamani¹⁵ in Hepatitis-C. Ramakrishnan J and Thavamani K. also studied on Indian Contributions to the Field of Leptospirosis.¹⁶

Bradford¹⁷ described a scattering pattern of journals in the area of applied geophysics and lubrication. There are plenty of studies conducted on Bradford's Law. Heine¹⁸ noticed the different ranking conventions which exists in the relationship between 'journal productivities' and 'journal ranking by productivity' of Bradford's distributions. Ravichandra Rao¹⁹ studied the applicability of what Bradford in his book on 'Documentation' derived, the law of scattering, based on algebraic explanation with the supposition that $n_1 = n_2 = n$. Feicheng and Rui²⁰ used the frequency rank analysis of Bradford's law in a research on mechanism and model of scattering distribution of scientific information. Bogaert, and other²¹ showed how Bradford curves, i.e. cumulative rank frequency function used in informetrics can describe the fragment size distribution of percolation models.

There are several of studies on mapping and Bradford law in health sciences²²⁻³³. Schlozman studied mapping the literature of allied health³⁴. Kundra³⁵ studied the behaviour of Bradford's Law towards citation data on Indian Medical Journal. Ramesh Babu and Ramakrishnan³⁶ studied on Indian Contributions to the field of Hepatitis (1984-2003) and used Bradford law to identify the core journals. Patra and Prakash Chand³⁷ studied on HIV/AIDS research in India. Ramakrishnan J and Thavamani K³⁸ studied on core journal analysis of the Literature on Leptospirosis. They used Bradford's law of scattering to identify core journals.

III. LUNG CANCER

According to Wikipedia "the Lung Cancer also known as lung carcinoma, it is a malignant lung tumor characterized by uncontrolled cell growth in tissues of the lung. If left untreated, this growth can spread beyond the lung by the process of metastasis into nearby tissue or other parts of the body. Most cancers that start in the lung, known as primary lung cancers, are carcinomas. The two main types are small-cell lung carcinoma (SCLC) and non-small-cell lung

carcinoma (NSCLC). The most common symptoms are coughing (including coughing up blood), weight loss, shortness of breath, and chest pains. The diagnosis is confirmed by biopsy which is usually performed by bronchoscopy or CT-guidance. Prevention is by avoiding risk factors including smoking and air pollution. Worldwide in 2012, lung cancer occurred in 1.8 million people and resulted in 1.6 million deaths".³⁹

IV. OBJECTIVES OF THE STUDY

The Objectives of this study are,

1. To study the growth of literature in the field of Lung Cancer.
2. To identify the core journals in the field of Lung Cancer.

V. METHODOLOGY

The records published during the year 2010 to 2015 in the field of Lung Cancer in the MEDLINE data which are covered in the Pubmed (www.ncbi.nlm.nih.gov/pubmed/) "which is a free resource that is developed and maintained by the National Center for Biotechnology Information (NCBI), at the U.S. National Library of Medicine (NLM), located at the National Institutes of Health (NIH) was searched and bibliographic details like author, title, publication type, language, year; address of the contributors, country of publications, source etc. were collected. The retrieved records were converted into FoxPro and loaded in SPSS for the purpose of analysis". The keyword 'Lung Cancer' has been used for extracting the number of records available in the above said database and the data thus collected on the

literary production of 'Lung Cancer' for the period 2010-2015 has been used for this study. In order to determine the growth rate, the bibliometric techniques like Relative Growth Rate (RGR)^{40&41} and Doubling time (Dt)⁴² have been used. Bradford Law⁴³ used to bring the core journals in field of Lung Cancer.

VI. LIMITATIONS

This study is limited to a period from 2010 to 2015 using MEDLINE data which covered in Pubmed only.

VII. ANALYSIS AND INTERPRETATION OF DATA

Data collected from the source database namely MEDLINE on the literary production of 'Lung Cancer' for the period 2010-2015 has been analysed by using various bibliometric techniques as described.

A. Quantum of Lung Cancer Research Productivity

The research productivity on 'Lung Cancer' covered in the database is shown in Table 1. It is noticed that 64180 of the records on 'Lung Cancer' are covered in the MEDLINE database for a period of six years from 2010 to 2015. The year-wise distribution of literature on 'Lung Cancer' according to source database MEDLINE is shown in Table 1. It is found that the maximum number of records (14692) was published during 2015, followed by 14626 in 2014 and 13167 in 2013. On the whole, it is noticed that from 2010 onwards there is a gradual increase of Lung Cancer research productivity every year which clearly shows in the Figure-1.

TABLE 1 LITERATURE PUBLISHED IN LUNG CANCER BY YEAR WISE

S.No.	Year	Frequency	%	Cumulative %
01	2010	642	1.00	1
02	2011	9190	14.32	15.32
03	2012	11863	18.48	33.8
04	2013	13167	20.52	54.32
05	2014	14626	22.79	77.11
06	2015	14692	22.89	100.00
	Total	64180	100.00	

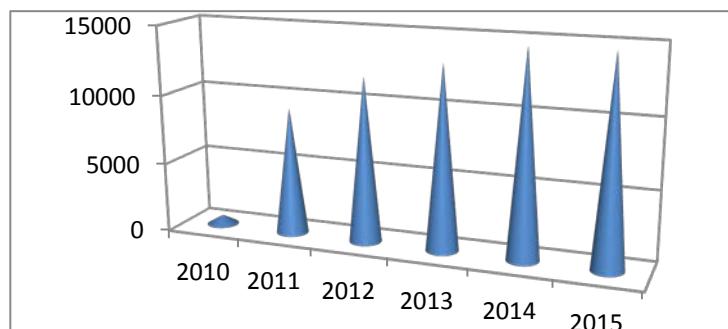

Fig.1 Year-wise Literature published in Lung Cancer

B. Publication types Distribution of Lung Cancer Research

Table 2 reveals the distribution of the ‘Lung Cancer’ research output according to various publication types of MEDLINE. It was found that the records in Journal Article (27554), Research Support, Non-U.S. Gov’t (23170), Review (6609), Research Support, N.I.H., Extramural (2443), Letter (1752), Editorial (643), Multicenter Study (314), Randomized Controlled Trial (286), Meta-Analysis

(281), Validation Studies (264) News (234), Video-Audio Media (111), Observational Study (89), Practice Guideline (71), Introductory Journal Article (68), English Abstract (47), Published Erratum (47), Retract ion of Publication (46), Congresses (40), Personal Narratives (16), Portraits (15), Book (12), Patient Education Handout (9), Technical Report (8), Historical Article (6), Interview (6), Book Chapter (4), Lecture (4), Bibliography (3), Case Reports (3), Webcasts (3), Twin Study (2) and Others (20).

TABLE 2 PUBLICATION TYPE

S.No.	Publication Type	Total	%
1.	Journal Article	27554	42.93
2.	Research Support, Non-U.S. Gov't	23170	36.10
3.	Review	6609	10.30
4.	Research Support, N.I.H., Extramural	2443	3.81
5.	Letter	1752	2.73
6.	Editorial	643	1.00

	Total	64180	100.00

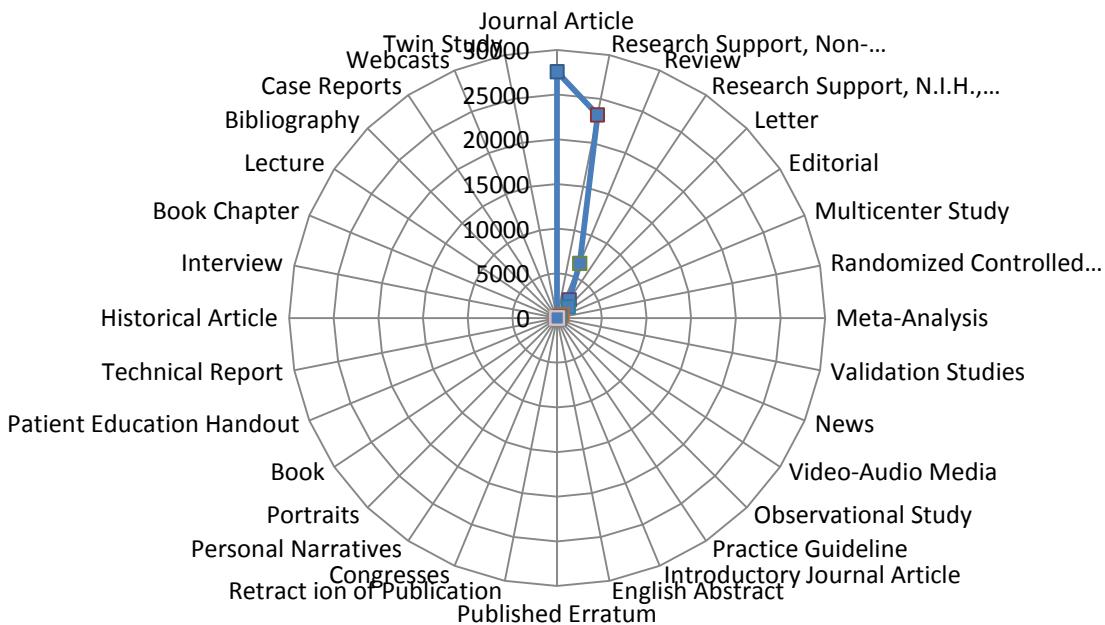

Fig.2 Publication Type in Lung Cancer

C. Relative Growth Rate (RGR) and Doubling Time (DT)

The analysis of data on the literary output in Lung Cancer has been done with parameters such as Relative Growth Rate (RGR) and Doubling Time (Dt). It is seen from Table

3 and Fig. 3 that RGR has been decreasing from 2011 (2.73) to 2015 (0.26). On the other hand, the Doubling Time (Dt) has shown an increasing trend. The data in Table 3 reveals that Doubling time has increased from 0.25 in the year 2011 to 2.67 in the year 2015 (Figure 2).

TABLE 3 RGR AND DT FOR LUNG CANCER RESEARCH OUTPUT BY YEAR-WISE

Sl. No.	Year	Quantum of Output	Cumulative Total of Output	W_1	W_2	RGR	Dt(a)
1	2010	642	642		6.46		
2	2011	9190	9832	6.46	9.19	2.73	0.25
3	2012	11863	21695	9.19	9.98	0.79	0.87

5	2014	14626	49488	10.46	10.81	0.35	1.98
6	2015	14692	64180	10.81	11.07	0.26	2.67

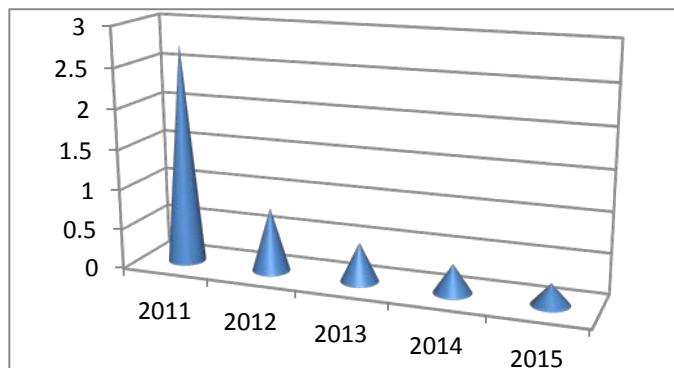

Fig.3 Relative Growth Rate for Research Output in Lung Cancer

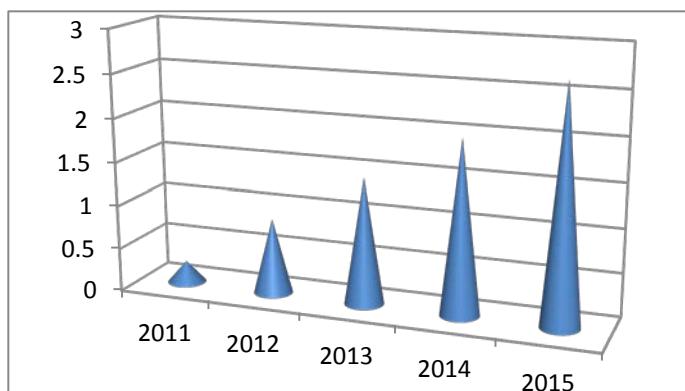

Fig.4 Doubling time for Research output in Lung Cancer

D. Distribution of Journals in Lung Cancer Based on Bradford Law of Scattering

As per the Bradford Law, the journals are grouped into three zones producing similar number of articles. The distribution of journal by zone wise is given in the Table 4. It is seen from Table 4 that 53 core journals grouped in zone 1 published 9211 articles accounting for one third of the

total output. Similarly the second zone comprises of 291 journals and 2759 journals grouped in third zone. The Bradford's Law states that the number of periodicals in zones, the first zone and second zone will be $1:n:n^2$. Accordingly the relationship is the zone will be $53:291:2759$. On comparison with the data in Table 4, it is clear that the trend of research publication confirms the implication of Bradford's Law (Figure 5).

TABLE- 4 DISTRIBUTION BY ZONE OF CITED JOURNALS AND REFERENCES IN LUNG CANCER

S.No.	Zone	No. of Journals		No. of Papers	
		No.	(%)	No.	(%)
01.	Zone 1	53	1.71	9211	33.43
02.	Zone 2	291	9.38	9321	33.83
03.	Zone 3	2759	88.91	9022	32.74
Total		3103	100.00	27554	100.00

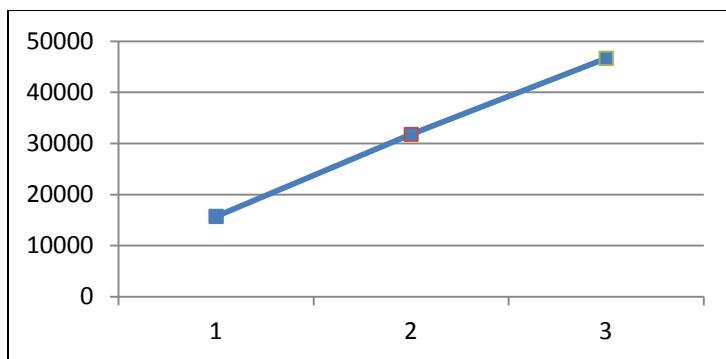

Fig.5 Distributions of Journals by Zones

E. Ranking of Journals in Lung Cancer Research

Ranking of the journals based on the research output on 'Lung Cancer' for the year 2010-2015 is given Table 5. The highly productive journals up to five ranks are as follows.

1. 'The Annals of thoracic surgery' with 519 contributions amounting to 1.88% of total contributions.

- 1.
2. 'Journal of thoracic oncology' published with 434 contributions amounting to 1.58%.
3. 'Gan to kagaku ryoho. Cancer & chemotherapy' with 423 contributions amounting to 1.54%.
4. 'Lung cancer (Amsterdam, Netherlands)' with 413 contributions amounting to 1.50%.
5. 'Oncology letters' with 386 contributions amounting to 1.40%.

TABLE 5 RANKING OF JOURNALS IN LUNG CANCER RESEARCH

S.No.	Name of the Journal	No. of Records	%	Cumulative records
1.	The Annals of thoracic surgery	519	1.88	519

VIII. CONCLUSION

In the field of medicine, the results show that Lung Cancer literature is growing year after year. It also shows that maximum number of records covered by journal articles in MEDLINE in the field of Lung Cancer. 344 core journals were indentified with the help of zone-1 and zone-2 as per Bradford's Law. Further the research productivity of Lung Cancer confirms the implications of Bradford's Law of Scattering.
